SONY®

New compact HDV1080i CMOS camcorder for the Professional

HVR-A1P

HDV1080i CAMCORDER

True High Definition acquisition becomes even more accessible as Sony introduces its most compact professional HDV camcorder to date. Weighing just 670g (without XLR adapter), the new Sony **HVR-A1P** is an ideal choice for a wide range of professional users seeking the quality and convenience of the HDV format in the smallest, lightest package yet with full 1080 line resolution. Building on the strengths of the acclaimed HVR-Z1P, the new camcorder joins the professional Sony HDV line-up. Thanks to its highly compact design, it offers an ideal solution for applications where space is limited or complete mobility is required.

Like other professional HDV products from Sony, the HVR-A1P provides a 'bridge' between the worlds of HD and SD production, thanks to its ability to capture and playback in HDV, DVCAM and DV formats. Like the successful HVR-Z1P, the **HVR-A1P** incorporates features that have designed with professional users in mind, including:

- Built-in down-conversion to Standard Definition
- 2-channel Audio XLR inputs
- Time Code Preset
- 16:9 Viewfinder (Black & White, Colour switchable)
- 2.7-inch 16:9 Hybrid LCD monitor

In addition, other new functions include:

Still image capture – Maximum pixel size for still images is 2.8M (1920x1440) pixels in Memory Mode. Users can record 1.2M (1440x810) pixel images in Tape and Play/Edit Mode.

Histogram Indicator – Users can check the brightness of an object and easily adjust exposure by viewing this graphical presentation.

Tele Macro – This feature enables users to capture a macro image from a distance. This is especially useful for shooting smaller moving objects, and it also provides the ability to make subjects more prominent against a backdrop.
